**Re: Coolroom Mould and Bacteria Treatment**

Dear Andrew,

I wanted to write to you to thank you for the advice you have given us, and the treatment program you have implemented, at Wollongong TAFE to minimise contamination due to air borne bacteria in our coolrooms.

The treatments were customised to fit the individual needs of each area of the campus and the initial treatment was carried out with a minimum of disruption to our everyday operations.

With a HACCP plan and the highest FSANZ standards employed by the TAFE, as well as the education of future hospitality and food service workers, it is nice to know that I can rely on a company such as Jaymak to maintain the highest standards of sanitisation in our food storage areas.

I am impressed with the work that has been done on our initial service and look forward to continuing the ongoing preventative services to maintain the program you have set up.

I would not hesitate in recommending Jaymak to other TAFE managers and also to the students we train and send out into the workforce.

Regards,

Jackie Lindsay  
Operations Manager
